

J. S. Smith Consulting Engineers has been providing structural engineering services since established in 1982. During that time, we have gained a reputation for being reliable, efficient and accurate while designing structures that have been constructed in a variety of settings from coast to coast.

Having substantial experience in the use of diverse construction materials, J. S. Smith Consulting Engineers has designed structures composed of various combinations of steel, reinforced concrete, post-tensioned & pre-stressed concrete, Masonry, timber and laminated wood products to meet the needs of each specific project.

We have gained essential experience in the design of virtually every type of structure ranging from small classroom additions to large theaters and multistory hotels. In accumulating this experience, we have cultivated long lasting relationships with our clients by consistently catering to their needs and schedules while providing them with superior quality and service.

Mission Statement:

The fundamental objective of J. S. Smith Consulting Engineers is to provide our clients with structural engineering services of a high quality and a timely manner. Our emphasis is on accuracy and efficiency in both our design and our drawings. We feel that the quality and clarity of our drawings is a reflection of both our firm and our client and should therefore not be compromised. Of equal importance is our firm's ability to deliver on time. We at J. S. Smith Consulting Engineers pride ourselves in the fact that we developed a solid reputation for being reliable and responsive. If a project can be delivered on time, it will be delivered on time.
